

Assignment 15 - Introspective

From looking on the web, most main skills needed to be successful for a web developer job are being

- Proficient with HTML, CSS, and JavaScript
- Experience with Cloud Hosting like AWS, Google Cloud, and Azure
- Being able to communicate in a business setting
- Know how to maintain a website
- Working with a CMS
- Experience with one backend language like PHP, Python, and Ruby
- Bachelors degree or Masters degree in Computer Science, Computer Engineering, Electrical Engineering, Information Systems, IT
- Experience ranging from 1 – 6 years

There are some qualifications, but they are career orientated. From the list above the qualifications I do not have are experience with cloud services, working with CMS, and experience ranging 1 – 6 years. I have some experience with Python but not enough to know how to implement it to a website setting or backend. To obtain most of these skills I would need to either get an internship with a company that can help me obtain these skills or work on individual projects that cover these topics. But I believe for me in my career an internship is a must since it will give me needed work experience while giving me new projects to put on a portfolio.
